Milestone-7 Conclusion

Outcome

1. This lab demonstrates how script-controlled READ, CREATE, WRITE, and DELETE ACLs enforce record-level security in ServiceNow.
2. User roles and record field values are evaluated together to control access.
3. READ access is controlled using the Branch condition and the script.
4. CREATE, WRITE, and DELETE operations are controlled through the corresponding custom roles.
5. Administrators retain full access.
6. These ACLs help protect sensitive records from unauthorized viewing, modification, creation, and deletion.
